Subj: Integrity of the VA Enterprise/Class III Software (WebCIMS #429478)

To: VA OI&T Field Operations and Developmental Staff

- The quality of many of the services we provide to our veterans depends directly on the availability of IT services; anything that compromises that availability reduces our effectiveness.
- Recently, outages have occurred that are directly traceable to the deployment of Class III software¹. While such software is developed to address specific needs identified at the local, network or regional level and represents an attempt to improve service, the unregulated deployment of software presents an unacceptable risk.
- The management of Class III software is a complicated challenge where innovation must be balanced with the need to protect the integrity of the enterprise and the security of the information it stores. As such, cross-functional groups have been assigned to establish and evolve the following programs. Updates on the progress of these programs will be issued via the IT Field Operations Newsletter <http://vaww.iffo.portal.va.gov> and follow-on policy actions.
 - A Field Development process will ensure field-developed solutions to address local requirements meet national standards and are adequately documented, reviewed, and tested prior to deployment;
 - The existing Class III to Class I process expedites conversion of Class III software to centrally managed software;
 - The Innovation Program will provide a safe, supported environment where new concepts can be developed/refined/tested;
